MEMORANDUM FOR: Project Cable Releasing Officers

SUBJECT: Cable Security

1. It has come to my attention recently that some cables have been sent which have not made proper use of cryptonyms and pseudonyms. I would like to re-emphasize the importance of using established cryptonyms and pseudonyms wherein possible. When a cable has been released, the releasing signature confirms that the officer has checked the cable for proper classification, address, coordination, and authentication; also that the proper precedence and routing indicators are assigned; that the message is consistent with approved plans, policies, and procedures; and that the message is securely worded.

2. Although all project cables are routed through the office of the Project Director of Administration, responsibility in all cases lies with the releasing officer.
